Beskrivning: Quantum Magnetic Analyzer (Engelsk Version)
🔆 Model: 200 – 8, 9 - Klinik – modell för kliniskt bruk (<u>ej QRMA eller QMRA, för hemmabruk</u>)
ŽÅterförsäljare i Norden – VitalKunskap sth KB – <u>www.vitalkunskap.se</u> – <u>info@vitalkunskap.se</u>
$\frac{1}{2}$
Principle of Analysis
Human body is an aggregate of numerous cells, which continuously grow develop, split, regenerate
😤 and die. By splitting up, cells renew themselves. For adult people, about 25 million cells are splitting up
\sum every second and blood cells are constantly renewing at a rate of about 100 million per minute. In the \sum
Tprocess of cellular split-up and renewal, the charged bodies of nucleus and extranuclear electrons as
the basis unit of a cell are moving and changing ceaselessly at a high speed as well, emitting
Lettromagnetic waves without interruption. The signals of electromagnetic waves emitted by human
bodies represent the specific condition of human body and therefore, different signals of electro-
amagnetic waves will be emitted by the conditions of good health, sub-health, diseases, etc. The
conditions of life can be analyzed if such specific electromagnetic wave signals can be analyzed.
The quantum mean stip angly zer is a new instrument to angly zer such shares and the second starts and the sec
☆The quantum magnetic analyzer is a new instrument to analyze such phenomenon. The weak ☆ magnetic frequency and energy of human body are collected by holding the sensor, and after
\approx amplification by the instrument and treatment by the built-in micro-processor, the data are compared
with the standard quantum resonant spectrum of diseases, nutrition and other indicators incorporated
in the instrument to judge whether the sample waveforms are irregular using the Fourier approach.
Analysis and judgment can thus be made on health condition and main problems of the testee based
f on the result of waveform analysis, as well as standard protective and curative proposals.
Analysis Items
The method of quantum magnetic analysis is an emerging rapid, accurate and non-invasive spectral
testing method and particularly suitable for comparison of curative effects medicine and health
products, and check of sub-health conditions. The main analysis items are over 30, including
cardiovascular and cerebrovascular condition, bone mineral density, trace elements, blood lead,
😤 rheumatism, lung and respiratory tract, nephropathy, blood sugar, stomach and intestines, liver and
gall, cranial nerves, gynecology, prostate, bone disease, the trace elements of selenium, iron, zinc and
Calciun, etc.
Functional Characteristics
Prediction without symptoms: With only 10 or so cells of pathological change, the analyzer can
capture the change pathological changes of cells and predict the precursor of disease. By taking
\star health-care actions at this moment, you will be enabled to effectively prevent the various chronic \star
Speed and accuracy: Multiple indicators of your health can be obtained within minutes. This analysis method is designed to save your time and energy. The database of the analysis system
has been established with scientific method, strict health statistic treatment and demonstration of a
Large number of clinical cases, leading thus to a high analysis accuracy.
Non-invasive and painless: The analysis will tell you the condition of your health without hemanalysis
or radiography.
Simple and convenient: It is easy in operation and in general, people will be able to analyze and
winterpret the result through short-term training. Health check can be performed in any place and at any
time, saving the time of patients. The cost for analysis is adequate and can be accepted by most
☆consumers.
